

Rabbit Hole Briefing

The Rabbit is in his hole (the tunnels); if your dog goes in a tunnel and disturbs the rabbit, he can't deliver the Easter Eggs for tomorrow's festivities! To get him back into his hole you must go through the rabbit hole redirect sequence and get back out on course.

At obstacles #5, 7, and 10, if your dog takes the tunnel instead of the correct next obstacle, you must direct your dog to the a-b-c sequence (#5 is in green, #7 is in blue, #10 is in red). You won't be accessed any faults as long as you direct your dog through that sequence before moving on. If you don't correct it before moving on, or don't correctly do the a-b-c sequence, 20 faults for failure to perform will be accessed.

Missed contacts and knocked bars are 5 faults. No fault in the weaves as long as they are completed.

SCT is 55 seconds for big dogs and 60 seconds for small dogs. Any faults will be added to your time (time + faults scoring system)
